[57] ABSTRACT

A method and system for selecting a group of coordinated fabrics is provided. The system consists of a display member, which displays characteristics of the selected fabrics. Markers or a computer processing unit are used to record the characteristics of the selected fabrics. When the recorded characteristics of the selected fabrics are arranged in a predetermined manner, the selected fabrics are coordinated. Once the selected fabrics have coordinated, they may be used for decorating an area, such as a room in a house.
